

Configure the application to receive the data from the cloud

Team id	PNT2022TMID13452
Project title	Real time river water quality monitoring and control system
Maximum marks	4 marks

It is created by the use of gateway nodes to create the virtual data warehouse. It allows application developers to map access to remote data points.

The screenshot shows the IBM Watson IoT Platform interface. The top navigation bar includes 'Browse', 'Action', 'Device Types', and 'Interfaces'. The left sidebar contains various icons for navigation. The main content area displays a table with the following data:

Event	Value	Format	Last Received
data	{"pH_value":10,"Turbidity":395}	json	a few seconds ago
data	{"pH_value":4,"Turbidity":20}	json	a few seconds ago
data	{"pH_value":9,"Turbidity":123}	json	a few seconds ago
data	{"pH_value":13,"Turbidity":959}	json	a few seconds ago
data	{"pH_value":1,"Turbidity":655}	json	a few seconds ago
